

O-LIFE CARD

PREMISE

IF YOU HAVE FOUND THIS USB KEY IT MEANS THAT I NEED HELP, YOU CAN CONSULT IT BY CLICKING "SOS" TO KNOW WHO AM I AND TO KNOW MY CLINICAL DATA.

INSTRUCTIONS FOR COMPILATION

This paragraph introduces the user to the compilation of O-LIFE CARD.

O-LIFE CARD is easy to fill in, all you need is a notepad (is installed by default in any operating system of any home computer), alternatively if you have no choice you can use the editor in the main folder, but our advice is to use the editor on your computer.

In the main folder of the flash drive (as soon as you open it) there is a folder called "testi", enter on it and you will see text files ("IT" folder for the Italian language, "EN" for the English one, "ES" for Spanish), open them one at a time and compile them with your data, inside each one is explained what kind of data you have to enter.

In a second moment, take a picture of your face (any smartphone is fine to do it) and load it instead of "foto.jpg" inside the main directory, respecting case sensitive letters.

Subsequently, if you have made a will, scan it and convert it to pdf (you can also download an app to make the pdf on your smartphone and photograph the document) and insert it into the "testamento" folder in the main directory of the usb key and delete the "testamento.pdf" file that you find already preloaded.

Finally, do the same thing with your medical reports and medical records and insert them into "cartelle_cliniche" and delete the file "cartelle.pdf".

Keep the key together with your identity card or in any case in a place where those who find you (in case you need help) will immediately learn about your medical data.
